OUR DREAM

Where a child is born should not define where they end up.

$R^2=0$ — conditions at birth with no predictive power over someone's future earnings.

AI is the first change in a generation that substantially alters what a school and a state can do. Governments cannot take the risk of finding out what works, and markets will not fund what has no buyer yet. **We take both risks to find disruptive, scalable solutions.**

WHERE Our five priority countries: **Brazil · Colombia · Costa Rica · Peru · Uruguay**.

SUCCESS IN 2031 Our models scaled up, spun off and adopted by governments and markets.

OUR STANCE ON AI Ambitious about AI's potential, rigorous about its evidence, and committed to human agency, safety and equal opportunity.

TWO AREAS OF WORK

EDUCATION & TECH

Backing AI-enabled education innovation that measurably improves learning and economic opportunity

For-profit and not-for-profit alike, in AI- and preferably B2G-driven solutions, from early childhood to higher education.

PUBLIC LEADERSHIP AND INNOVATION

Equipping people in government to leverage AI for $R^2=0$

Politicians, appointees and senior officials with real authority, backed with capability, technical talent and AI tools, so the state delivers more, better, for less.

Democracia+ Strengthening political leadership across the ideological spectrum.

Groundwork: a clearly defined point of view, investment in system enablers, and our own operations to test and learn.

THREE NEEDLES TO MOVE BY 2031

WHAT CHILDREN AND YOUTH LEARN, AND WHERE IT TAKES THEM

5M

students learning measurably more

+ 25K young people earning more through higher education and tech careers

WHAT AND HOW THE STATE DELIVERS

25

public services or policies that reach more people, serve them better or cost less

together covering **100M people**, at national scale in every priority country

WHO SHAPES THE STATE

1,200

Democracia+ alumni in elected office

and **measurably better politicians** than their peers, across the political spectrum

TWO GATES — EVERYTHING WE DO ENTERS THROUGH ONE OF THEM

Create We build what does not exist yet: incubating new ventures and organizations, and investing early in founders and reformers to unlock innovation.

LatAm Scale We take what proves out to new countries — non-linearly, toward full adoption by governments and markets.

HOW WE WORK

- **Venture philanthropy.** Hands-on and selective, with venture discipline and philanthropic ambition.
- **No open calls.** We map and seek out the entrepreneurs and leaders who fit the strategy.
- **More than capital.** Our team and the connections we make are a key part of how we add value.
- **Evidence at the core.** We take measurement, evaluation and learning seriously: we track the needles and help partners build and learn from evidence.
- **Additionality.** We seek the points of maximum leverage for our investments — funding not just what works, but where we can really make a difference.

TWO AREAS OF WORK — THE STRATEGY IN DEPTH

EDUCATION & TECH

Stronger education ecosystems for the AI era

VISION

Leveraging the AI age, education ecosystems — public and private actors — that continuously learn and adapt to deliver **measurably better learning and large-scale opportunities for socioeconomic mobility**, from early childhood through higher education.

VER+'S ROLE

Catalyst and orchestrator. We create, finance and scale up education innovation, and take the risks a school system cannot, so what works can scale through public systems and markets.

INVESTMENT THESIS

We **finance and accelerate innovations capable of improving learning at scale**, while building the markets, capabilities and infrastructure that let education ecosystems adopt, scale and replace innovations — far beyond us, without us.

MAIN BET

Backing AI-enabled education innovation that measurably improves learning and economic opportunity

For-profit and not-for-profit alike, in **AI- and preferably B2G-driven** solutions. Indifferent to the vehicle, demanding about the test: a named learning outcome, a credible path to public-system or market adoption, more learning per dollar than the known alternatives, and evidence strong enough that someone else buys it once we stop paying.

All ages, concentrated where we add most value today: early childhood, K-12 and higher education.

GROUNDWORK

- **The agenda** — our point of view on AI and education: what needs to be learned in the AI era, how AI can narrow rather than widen the income gap, and the roadmap to get it adopted.
- **System enablers** — what a public system needs to adopt and keep what works: procurement, interoperable data, learning standards, evidence and connectivity.
- **Our own operations** — testing and learning close to children and families, trying ideas ourselves before we propose them to anyone else.
- **People & talent** — tech talent as a route out of poverty for young people, and the pipeline education innovation depends on.

PUBLIC LEADERSHIP AND INNOVATION

Leveraging AI for $R^2=0$

VISION

Democratic governments leverage AI to **improve access and quality of services, cut costs, and generate more intelligence**, creating improved access to opportunities at scale.

VER+'S ROLE

Catalyst and orchestrator. We invest in the people who run the state — capacity, skills, resources, tools — and take the risks a government cannot, so what works can become public policy, holding the AI-for-$R^2=0$ agenda steady beyond any single administration.

INVESTMENT THESIS

Governments decide whether opportunity reaches everyone, and governments are made of people. So we **invest in people, tools, resources and the advocacy to advance them** — until governments leverage AI for equal access to opportunity without us, at scale.

MAIN BET

Equipping people in government to leverage AI for $R^2=0$

We make capable people in decisive public roles more effective **by putting AI to work inside the state** — reaching more people with better services, delivering more for far less, and using what the state already knows to decide better. We build their capability and their teams' AI literacy, put **technical talent alongside them**, and get the AI tools they need built. The people: politicians, political appointees and senior career officials — not the general civil service.

At every level of government: national for policy, AI offices and data infrastructure; state and municipal for the services that create social mobility.

INCUBATION

Democracia+ — part of this area, with **its own needle**. **What sets it apart:** a non-partisan network of organizations across Latin America that attract, select, train and support political leaders before, during and after elections.

GROUNDWORK

- **The agenda** — advocacy for AI-native governments: our point of view on which government functions and services can leverage AI to create social mobility and improve government efficiency, and the work of getting it adopted, with democratic safeguards.
- **System enablers** — the infrastructure an AI-native government runs on: interoperable public data and digital public infrastructure, as a means to an end, through high-impact use cases.
